

ALBATROS

PERFECT PERSPECTIVE

Pimapen Albatros Sliding Door Series are applied in double, triple and quadruple combinations as PVC doors and, there is no vertical profile on the edge when the door leaves are open in the installations of 90° edges thanks to the special design moveable edge joining profile, thus resulting in spacious spaces without interrupting the view.

Class B (TS EN 12608-1)

Gasket System

Brush Gasket / TPV

Gasket Type - Color

TPE - Gray / Black

Glazing Thicknesses (mm)

4, 20, 24

PROFILE

With 6 types of frame profiles, the Pimapen Albatros Sliding Series offer solutions intended to meet all types of requirements. Possible to install sliding windows and doors with two, three, four, five and six casements/leaves. Since the fixed partition frame profile has a movable casement / leaf inside, it offers an ergonomic and secure use. Thus, it is possible to install external insect screens and blinds in a more efficient manner.

GLAZING COMBINATIONS

There are glazing beads allowing for the use of double glazing, triple glazing or panels in the width of 4-20-24 mm. Tempered glazing offers resistance against impacts.

DESIGN

A visual integrity is offered on the interior surface and, the joinery and wall joints with a self-sill frame profile. Possible to install a sliding insect screen without the need for an additional rail thanks to the self-insect screen rail frame profile. Thanks to the special design glazing beads with oval lines, eye-catching and elegant profile-glazing joints are offered.

INSULATION

Thanks to well-designed intermediate sealing profiles, sealing parts and brush seals, a high level of sealing is achieved. Durable and flexible gaskets with high UV resistance, resistance to variables such as humidity or ambient temperature are used.
